

**WHAT IS CLAIMED IS:**

- 1 1. A method of exchanging data between computing devices,  
2 said method comprising:  
3 identifying a receiving device;  
4 sending a receiving agent to the receiving device,  
5 wherein the receiving agent identifies download  
6 data; and  
7 downloading the identified download data to the  
8 receiving device.
- 1 2. The method as described in claim 1 wherein the  
2 receiving agent includes a bootstrap agent and a  
3 lifecycle control agent.
- 1 3. The method as described in claim 1 further comprising;  
2 admitting a user of the receiving device to an event,  
3 wherein the sending is performed in response to  
4 the admitting.
- 1 4. The method as described in claim 1 further comprising;  
2 determining whether the receiving agent is  
3 operational; and  
4 reinitializing the receiving agent in response to the  
5 determination.
- 1 5. The method as described in claim 4 wherein the  
2 receiving agent is selected from the group consisting  
3 of a bootstrap agent and a lifecycle control agent.
- 1 6. The method as described in claim 1 further comprising:  
2 identifying a class of service; and  
3 sending content information corresponding to the class  
4 of service to the receiving device.

- 1 7. The method as described on claim 6 wherein the class  
2 of service is selected from the group consisting of  
3 text only, video, video plus, and audio.
- 1 8. The method as described in claim 1 wherein the  
2 receiving agent includes a service time;  
3 setting a timer corresponding to the service time; and  
4 de-activating the receiving agent in response to the  
5 timer reaching the service time.
- 1 9. The method as described in claim 1 further comprising;  
2 identifying an event with an event identifier;  
3 selecting event data corresponding to the event  
4 identifier; and  
5 downloading selected event data to the receiving  
6 device.
- 1 10. An information handling system comprising:  
2 one or more processors;  
3 a memory accessible by the processors;  
4 a network interface for communicating with other  
5 information handling systems;  
6 one or more nonvolatile storage areas accessible by  
7 the processors; and  
8 a data exchange tool for sending and receiving  
9 wireless information, the data exchange tool  
10 including:  
11 means for identifying a receiving device;  
12 means for sending a receiving agent to the  
13 receiving device, wherein the receiving  
14 agent identifies download data; and

15 means for downloading the identified download  
16 data to the receiving device.  
17

1 11. The information handling system as described in claim  
2 10 wherein the means for the receiving agent includes  
3 a bootstrap agent and a lifecycle control agent.

1 12. The information handling system as described in claim  
2 10 further comprising;  
3 means for admitting a user of the receiving device to  
4 an event, wherein the sending is performed in  
5 response to the admitting.

1 13. The information handling system as described in claim  
2 10 further comprising;  
3 means for determining whether the receiving agent is  
4 operational; and  
5 means for reinitializing the receiving agent in  
6 response to the determination.

1 14. The information handling system as described in claim  
2 13 wherein the means for the receiving agent is  
3 selected from the group consisting of a bootstrap  
4 agent and a lifecycle control agent.

1 15. The information handling system as described in claim  
2 10 further comprising:  
3 means for identifying a class of service; and  
4 means for sending content information corresponding to  
5 the class of service to the receiving device.

1 16. The information handling system as described in claim  
2 15 wherein the means for the class of service is

3 selected from the group consisting of text only,  
4 video, video plus, and audio.

1 17. The information handling system as described in claim  
2 10 wherein the means for the receiving agent includes  
3 a service time;  
4 means for setting a timer corresponding to the service  
5 time; and  
6 means for de-activating the receiving agent in  
7 response to the timer reaching the service time.

1 18. The information handling system as described in claim  
2 10 further comprising;  
3 means for identifying an event with an event  
4 identifier;  
5 means for selecting event data corresponding to the  
6 event identifier; and  
7 means for downloading selected event data to the  
8 receiving device.

1 19. A computer program product stored on a computer  
2 operable medium for exchanging data between computing  
3 devices, said computer program product comprising:  
4 means for identifying a receiving device;  
5 means for sending a receiving agent to the receiving  
6 device, wherein the receiving agent identifies  
7 download data; and  
8 means for downloading the identified download data to  
9 the receiving device.  
10

- 1 20. The computer program product as described in claim 19  
2 wherein the means for the receiving agent includes a  
3 bootstrap agent and a lifecycle control agent.
- 1 21. The computer program product as described in claim 19  
2 further comprising;  
3 means for admitting a user of the receiving device to  
4 an event, wherein the sending is performed in  
5 response to the admitting.
- 1 22. The computer program product as described in claim 19  
2 further comprising;  
3 means for determining whether the receiving agent is  
4 operational; and  
5 means for reinitializing the receiving agent in  
6 response to the determination.
- 1 23. The computer program product as described in claim 22  
2 wherein the means for the receiving agent is selected  
3 from the group consisting of a bootstrap agent and a  
4 lifecycle control agent.
- 1 24. The computer program product as described in claim 19  
2 further comprising:  
3 means for identifying a class of service; and  
4 means for sending content information corresponding to  
5 the class of service to the receiving device.
- 1 25. The computer program product as described in claim 24  
2 wherein the means for the class of service is selected  
3 from the group consisting of text only, video, video  
4 plus, and audio.

1 26. The computer program product as described in claim 19  
2 wherein the means for the receiving agent includes a  
3 service time;  
4 means for setting a timer corresponding to the service  
5 time; and  
6 means for de-activating the receiving agent in  
7 response to the timer reaching the service time.

1 27. The computer program product as described in claim 19  
2 further comprising;  
3 means for identifying an event with an event  
4 identifier;  
5 means for selecting event data corresponding to the  
6 event identifier; and  
7 means for downloading selected event data to the  
8 receiving device.  
9
